

## **Icon Intuitiveness Test**

This is an evaluation of how users interpret icons on the computer desktop. These icons are taken from the toolbars of a number of applications, ranging from statistical packages to word processing applications to graphical editors.

### **Instructions**

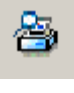

1. The table on the next page contains 20 icons and you are asked to specify what you think they mean.
2. This evaluation should not last longer than an hour.
3. Please do not be alarmed if you do not know what the icon really means — this evaluation is supposed to identify to the researcher the troublesome icons.
4. Your performance does not reflect a measure of your ability in any way.

Thank you for your time.
