

CHINZ 2008 Call For Papers

Stuart Marshall

Overview

Due to a few requests from authors, we have extended the deadline for submission to CHINZ 2008 from March 31st until midnight on April 14th.

The 9th Annual ACM SIGCHI/NZ Conference on Human-Computer Interaction will provide a forum for researchers and practitioners involved with Human Computer Interaction in New Zealand or other parts of the world.

The aim of this symposium is to bring together people interested in HCI, to allow them to exchange views, share experiences, and learn from one another. We welcome full length research papers in all areas of HCI, as well as work-in-progress, case-studies, industrial perspectives, student work and system demonstrations. In particular, we strongly encourage submissions by academics and practitioners involved in computer graphic design and research, on the topics of its applications or implications for human-computer interaction and user interface design.

Important Dates

1. 14th April 2008 - All submissions due.
2. 19th May 2008 - Response to authors.
3. 3rd June 2008 - Final submissions due.

Submissions

Full paper submissions are invited in all areas of Computer-Human Interaction. We also welcome proposals for posters and system demonstrations. Submissions should report original work, and will be reviewed. Accepted papers will be presented at the conference, published in the conference proceedings, and the ACM Digital Library. Papers should be no more than 8 pages in length and submitted as PDF files.

Submissions will be made through the EasyChair conference system, and a submission link will be available by March.

Graduate Students Workshop

The conference will also include a two-day HCI Graduate Students' Workshop. There is likely to be some limited funding available to assist selected students in attending this workshop and the conference. Students interested in attending the workshop are required to submit a one-page summary of their research by the due date for conference submissions.

Programme

The conference will take place over four days. The Graduate Students' Workshop will be held on 30 June - 1 July. This will be followed by the technical paper sessions and invited talks on 2-3 July.
